Dipesh Bikram Shah

Full Stack Java Engineer

Dallas, Texas | shah.dipesh201@gmail.com | linkedin.com/in/shahdipesh201 | github.com/dipeshshah070

PROFESSIONAL SUMMARY

- Full Stack Java Engineer with 3+ years designing, developing and deploying enterprise applications with Java, Spring Boot, microservices and modern UI frameworks — currently at Goldman Sachs.
- Builds backend systems with Java 17/21, Spring Boot, REST APIs, Kafka and event-driven architecture.
- Ships cloud-native services on AWS (Fargate, Lambda, EventBridge, SQS/SNS, EKS) with AWS CDK.
- Develops reusable UI features with Angular, RxJS and TypeScript, integrated with backend services.
- Works across relational and NoSQL data stores (Oracle, PostgreSQL, MySQL, MongoDB), practises TDD with JUnit and Mockito, and applies security controls with AWS Security Hub, Inspector and IAM.

PROFESSIONAL EXPERIENCE

Goldman Sachs

April 2026 – Present

Full Stack Java Engineer

- Built a Java microservice and designed its REST APIs, deployed and running on AWS.
- Secured the service and its APIs with PingFederate (PingFed) authentication.
- Defined AWS infrastructure as code with AWS CDK, creating and managing the service stacks.
- Deployed the service on AWS Fargate with event-driven integrations using EventBridge, Lambda, SQS and SNS.
- Managed secrets with AWS Secrets Manager and wired operational alerting through PagerDuty.

Environment: Java, REST APIs, PingFederate, AWS CDK, Fargate, EventBridge, Lambda, SQS, SNS, Secrets Manager, PagerDuty.

PNC Bank — Dallas, Texas

September 2023 – March 2026

Full Stack Java Developer

- Engineered and maintained microservices using Java 17, leveraging records, sealed classes and enhanced switch expressions for cleaner, more maintainable code.
- Utilized Apache Kafka for event-driven communication between microservices and Spring Batch for XML ingestion and scheduled data workflows.
- Built and optimized data persistence layers using Spring Data JPA, custom repositories and derived query methods; integrated Hibernate with Oracle and optimized MongoDB with indexes and aggregations.
- Containerized Spring applications with Docker and deployed to AWS EKS with ConfigMaps, secrets and autoscaling; integrated S3, EC2, RDS, Lambda and CloudWatch.
- Developed modular UI features in Angular 16 using RxJS, lazy loading and best-practice state management.
- Wrote unit and integration tests with JUnit and Mockito; implemented Spring AOP for logging, metrics and transactions.

Environment: Java 17, Spring Boot, Microservices, Hibernate, JPA, Kafka, Kubernetes, Angular 16, Oracle, MongoDB, AWS, Docker, Maven, Git, CI/CD.

TECHNICAL SKILLS

Languages	Java 8/11/17/21, Python, JavaScript, TypeScript, SQL, PL/SQL
Frameworks	Spring Boot, Spring MVC, Spring Security, Spring Batch, Spring AOP, Hibernate, JPA, Kafka, JMS, OAuth
Web	Angular 11/13/16, Angular Material, RxJS, React, HTML5, CSS3, Node.js
Web Services	RESTful APIs, Microservices Architecture, SOAP, JAX-RS, JAX-WS, JAX-B, Jersey
Cloud & DevOps	AWS (CDK, Fargate, Lambda, EventBridge, SQS, SNS, EKS, S3, RDS), Docker, Kubernetes, Terraform, Jenkins
Databases	Oracle, PostgreSQL, MySQL, MongoDB, Cassandra
Testing	JUnit, Mockito, PowerMock, TestNG, Cucumber, Selenium
Tools	Maven, Gradle, Git, Bitbucket, PagerDuty, Splunk, Grafana, Log4j, JIRA, Confluence, IntelliJ

EDUCATION & CERTIFICATIONS

Bachelor of Science, Computer Science — Louisiana Tech University CGPA 3.72

CompTIA Security+ · CompTIA Network+ · ThinkCloudly — SOC Bootcamp Certificate
