Dipesh Bikram Shah

Full Stack Java Engineer

Dallas, Texas | shah.dipesh201@gmail.com | linkedin.com/in/shahdipesh201 | github.com/dipeshshah070

PROFESSIONAL SUMMARY

- Full Stack Java Engineer with 3+ years designing, developing and deploying enterprise applications with Java, Spring Boot, microservices and modern UI frameworks — currently at Goldman Sachs.
- Builds high-performance backend systems with Java 17/21, Spring Boot, REST APIs, Kafka messaging and event-driven architecture.
- Ships cloud-native solutions on AWS (EKS, EC2, S3, RDS, Lambda, CloudWatch) with Docker and Kubernetes.
- Develops reusable UI features with Angular, RxJS and TypeScript, integrated with backend services.
- Works across relational and NoSQL data stores (Oracle, PostgreSQL, MySQL, MongoDB), practises TDD with JUnit and Mockito, and applies security controls with AWS Security Hub, Inspector and IAM.

PROFESSIONAL EXPERIENCE

Goldman Sachs

April 2026 – Present

Full Stack Java Engineer

- Full stack Java engineering on enterprise applications, spanning backend services and the user interface.
- Cloud engineering — building, deploying and running services on cloud infrastructure.

PNC Bank — Dallas, Texas

September 2023 – March 2026

Full Stack Java Developer

- Engineered and maintained microservices using Java 17, leveraging records, sealed classes and enhanced switch expressions for cleaner, more maintainable code.
- Utilized Apache Kafka for asynchronous, event-driven communication between microservices.
- Implemented Spring Batch jobs for XML file ingestion, scheduled email notifications and large-scale data workflows.
- Built and optimized data persistence layers using Spring Data JPA, custom repositories and derived query methods; integrated Hibernate ORM with Spring MVC against Oracle.
- Containerized Spring applications with Docker and deployed workloads to AWS EKS/Kubernetes using ConfigMaps, secrets and autoscaling policies.
- Integrated AWS services such as S3, EC2, RDS, Lambda and CloudWatch to build cloud-native, scalable solutions.
- Developed modular UI features in Angular 16 using RxJS, lazy loading and best-practice state management.
- Optimized MongoDB queries using indexes and aggregation frameworks for high-volume data operations.
- Created comprehensive unit and integration tests with JUnit and Mockito; resolved data issues ahead of production rollouts.
- Implemented Spring AOP for logging, performance metrics and transaction boundaries; conducted peer code reviews within Agile/Scrum teams.

Environment: Java 17, Spring Boot, Microservices, Hibernate, JPA, Kafka, Kubernetes, Angular 16, Oracle, MongoDB, AWS, Docker, Maven, Git, CI/CD.

TECHNICAL SKILLS

Languages	Java 8/11/17/21, Python, JavaScript, TypeScript, SQL, PL/SQL
Frameworks	Spring Boot, Spring MVC, Spring Security, Spring Batch, Spring AOP, Hibernate, JPA, Kafka, JMS, OAuth
Web	Angular 11/13/16, Angular Material, RxJS, React, HTML5, CSS3, Node.js
Web Services	RESTful APIs, Microservices Architecture, SOAP, JAX-RS, JAX-WS, JAX-B, Jersey
Cloud & DevOps	AWS (EKS, EC2, S3, RDS, Lambda, CloudWatch, IAM), Docker, Kubernetes, Terraform, Jenkins, CI/CD
Databases	Oracle, PostgreSQL, MySQL, MongoDB, Cassandra
Testing	JUnit, Mockito, PowerMock, TestNG, Cucumber, Selenium
Tools	Maven, Gradle, Git, Bitbucket, Splunk, Grafana, Log4j, JIRA, Confluence, IntelliJ, Tomcat

EDUCATION & CERTIFICATIONS

Bachelor of Science, Computer Science — Louisiana Tech University CGPA 3.72

CompTIA Security+ · CompTIA Network+ · ThinkCloudly — SOC Bootcamp Certificate
