Dipesh Bikram Shah

shah.dipesh201@gmail.com | (+1) 682 213 6217| /in/shahdipesh201

Professional Summary

- Software Engineer with 6+ years of experience in designing, developing, and deploying enterprise applications using Java, Python, Spring Boot, Microservices, and modern UI frameworks.
- Strong expertise in building cloud-native applications and deploying scalable solutions using AWS services, Docker, Kubernetes, and Terraform (IaC).
- Proficient in developing high-performance backend systems using Java 8/11/17/21, Spring Cloud, REST APIs, JAX-RS, Kafka messaging, and event-driven architecture.
- Skilled in creating reusable UI components and integrating backend services with Angular, React, JavaScript, and TypeScript.
- Solid experience working with relational and NoSQL databases including Oracle, PostgreSQL, MySQL, MongoDB, and writing optimized SQL/PL/SQL queries and stored procedures.
- Adept in Test-Driven Development (TDD) using JUnit, Mockito, and automated CI/CD pipelines using Jenkins, Maven, and Gradle.
- Hands-on experience implementing security and compliance controls using AWS Security Hub, Inspector, and IAM best practices.
- Strong understanding of core Java principles, including multithreading, collections, generics, concurrency, and functional programming.
- Experienced in Agile/Scrum environments, collaborating with cross-functional teams and contributing to sprint planning, code reviews, and production issue resolution.
- Strong communicator with proven ability to analyze complex problems, deliver efficient solutions, and maintain productive partnerships across global teams.

Technical Skills

Languages	Java 8/11/21, Python, JavaScript, Typescript, SQL, PL/SQL
Frameworks	Spring Boot, MVC, DAO, AOP, Security, Batch, Hibernate, JPA, Kafka, JMS, OAuth
Web Technologies	JavaScript, HTML5, CSS3, Node, Angular 11/13, Angular Material
Web Services	SOAP, Restful, UDDI, WSDL, JAX-RPC, JAX-RS JAX-WS, JAX-B, Axis2, Jersey, Micro Services Architecture
Development Tools	IBM RAD, Eclipse, Net Beans, IntelliJ and Spring Tool Suite
Database	Oracle, PostgreSQL, MySQL, MongoDB, Casandra
Testing Tools	Junit, Mockito, PowerMock, TestNg, Cucumber, Selenium
Other Tools	Gradle, Maven, Jenkins, Bitbucket, Git, Jenkins, Log4J, Splunk, Grafana, IntelliJ, JIRA, Confluence, Tomcat, Kubernetes, Docker, AWS, CI/CD

Education

Bachelor of Science | Louisiana Tech University | Computer Science CGPA: 3.72

Professional Experience

PNC Bank – Dallas, Texas

Full Stack Java Developer **September 2023 – Present**

- Engineered and maintained microservices using Java 17, leveraging new features like records, sealed classes, and enhanced switch expressions for cleaner code and better maintainability.
- Participated in Agile/Scrum ceremonies, managed sprint backlogs, and collaborated closely with cross-functional teams throughout development cycles.
- Built and optimized data persistence layers using Spring Data JPA, custom repositories, and derived query methods.

- Implemented Spring AOP for cross-cutting concerns including logging, performance metrics, and transaction boundaries.
- Integrated Hibernate ORM with Spring MVC for robust data modeling and efficient communication with Oracle databases.
- Created comprehensive unit and integration tests using JUnit and Mockito to maintain high reliability of services.
- Worked alongside DevOps teams to containerize Spring applications with Docker and deploy them on AWS.
- Developed modular UI features in Angular 16 using RxJS, lazy loading, and best-practice state management.
- Implemented Spring Batch jobs for XML file ingestion, scheduled email notifications, and large-scale data workflows.
- Utilized Apache Kafka for asynchronous event-driven communication between microservices.
- Deployed workloads into AWS EKS/Kubernetes, leveraging ConfigMaps, secrets, and autoscaling policies.
- Optimized MongoDB queries using indexes and aggregation frameworks for high-volume data operations.
- Integrated AWS services such as S3, EC2, RDS, Lambda, CloudWatch to build cloud-native, scalable solutions.
- Managed versions with Git/GitHub and used Log4j for structured application logging.
- Used Maven for build automation and deployed on WebLogic environments.
- Conducted peer code reviews and continuously improved performance and reliability across services.
- Executed extensive unit testing and resolved multiple data-related issues pre-production rollout.

Environment: Java 17, Spring Boot, Microservices, Hibernate, JPA, Kafka, Kubernetes, Angular 16, Oracle, MongoDB, AWS, Docker, Maven, Git, CI/CD.

American Airlines – Fort Worth, Texas
Full stack Java Developer **May 2019-August 2023**

- Worked in Agile Scrum teams, contributing to sprint planning, demos, and iterative delivery.
- Developed enterprise applications using Java, Spring Boot, Spring MVC, REST APIs, and microservices architecture, ensuring high scalability and modularity.
- Developed dynamic front-end interfaces using React, TypeScript, JavaScript, HTML5, CSS3, AJAX.
- Built reusable services, directives, and UI components for scalable front-end architecture.
- Designed and consumed REST APIs using Spring Boot and React for full-stack feature development.
- Implemented full-stack features using React + Spring Boot, enhancing user experience and reducing load times with efficient API integration.
- Preprocessed high-volume streaming data and transmitted it through Kafka topics, enabling real-time analytics.
- Built microservices to consume Kafka data and applied business rules using Spring Boot.
- Implemented backend logic and stored procedures using Oracle PL/SQL.
- Automated AWS infrastructure provisioning using CloudFormation and Terraform.
- Wrote robust unit tests with JUnit5/Mockito ensuring high test coverage.
- Deployed applications using Jenkins pipelines, Tomcat servers, and AWS resources.
- Leveraged DataDog for application monitoring, performance insights, and incident diagnostics.
- Designed Kubernetes deployments using Helm charts, implemented HPA and autoscaling strategies.
- Built RESTful XML-based web services for asynchronous communication via AJAX.
- Used MongoDB for flexible document storage and optimized indexes for query performance.
- Documented system architecture using UML diagrams, technical design docs, and user guides.
- Used JIRA for sprint tracking, bug management, and team coordination.

Environment: Java, React, Spring Boot, Kubernetes, Kafka, AWS, Oracle, MongoDB, Jenkins, Terraform, DataDog, Tomcat, React, Microservices.

Credentials

- CompTIA Network+ Certification
- CompTIA Security+ Certification
- ThinkCloudly - SOC Bootcamp Certificate
